

# GCSE Mathematics Practice Tests: Set 4

# Paper 2H (Calculator)

Time: 1 hour 30 minutes

You should have: Ruler graduated in centimetres and millimetres, protractor, pair of compasses, pen, HB pencil, eraser, calculator.

#### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer all questions.
- Answer the questions in the spaces provided
   there may be more space than you need.
- Calculators may be used.
- Diagrams are NOT accurately drawn, unless otherwise indicated.
- You must show all your working out.

#### Information

- The total mark for this paper is 80
- The marks for each question are shown in brackets
  - use this as a guide as to how much time to spend on each question.

#### **Advice**

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

**PEARSON** 

# **Answer ALL questions.**

### Write your answers in the spaces provided.

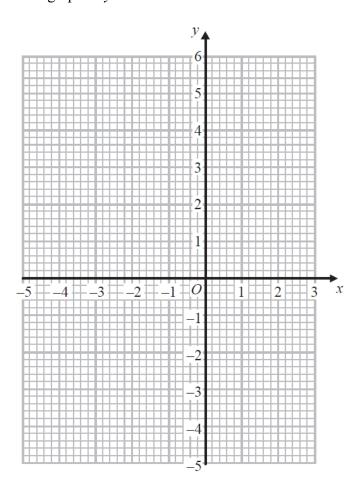

## You must write down all the stages in your working.

1. (a) Complete the table of values for  $y = x^2 + 2x - 3$ .

| x | -4 | -3 | -2 | -1 | 0 | 1 | 2 |
|---|----|----|----|----|---|---|---|
| y |    |    |    |    |   |   |   |

**(2)** 

(b) On the grid, draw the graph of  $y = x^2 + 2x - 3$  for values from -4 to 2.

**(2)** 

| •  | 3 T' 1 | 1 0   |      |
|----|--------|-------|------|
| 2. | Nick   | has 2 | cars |

Car A uses petrol.

Car B uses diesel.

Petrol costs £1.39 per litre.

Diesel costs £1.47 per litre.

The table below shows the average distance that Nick can drive each car using 1 litre of fuel.

| Car A | 10.3 miles per litre of petrol |
|-------|--------------------------------|
| Car B | 14.6 miles per litre of diesel |

Nick is going on a journey in one of his cars.

The distance Nick is going to drive is 450 miles.

Work out the difference of the total costs of the fuel for the 2 cars for this journey.

|----|---------|-------|--------|-----|
| 5. | Shabeen | has a | biased | com |

The probability that the coin will land on heads is 0.6.

Shabeen is going to throw the coin 3 times.

She says the probability that the coin will land on tails 3 times is less than 0.1.

Is Shabeen correct?

You must show all your working.

| $\mathscr{E} = \{1, 2, 3, 4, 5, 6, 7, 8, 9, 10\}$ |                 |
|---|-----------------|
| $A = \{\text{even numbers}\}$                     |                 |

|    |   |  |

**8.** Keith, Ben and Liz tested a coin to find out if it was biased.

They each threw the coin a number of times.

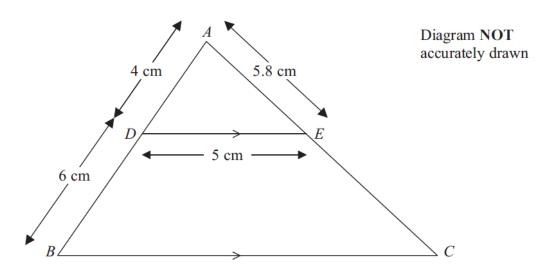

They counted the number of heads and the number of tails they each got.

The table gives information about their results.

|                 | Keith | Ben | Liz |
|-----------------|-------|-----|-----|
| Number of heads | 12    | 34  | 57  |
| Number of tails | 28    | 66  | 243 |

| (a) | Which person, Keith, Ben or Liz, will have the best estimate for the probability of getting a head on this coin? Explain your answer. |
|-----|---|
|     |   |
|     |   |
|     | (1)   |
| (b) | Using all the results in the table, work out an estimate for the probability that the next throw of the coin will be a head.          |

| 12. | There are only |  |  |
|-----|----------------|--|--|
|     | 4 mains big    |  |  |

4 mint biscuits and 1 toffee biscuit in a tin.

There are only

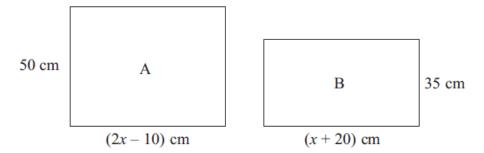

5 mint sweets and 3 strawberry sweets in a packet.

Michael's mum lets him take one biscuit from the tin and one sweet from the packet.

Michael takes a biscuit at random from the tin. He also takes a sweet at random from the packet.

Work out the probability that either the biscuit is mint or the sweet is mint, but not both.

**13.** The diagram gives information about two paintings, A and B. Each painting is in the shape of a rectangle.

Painting A has an area 1725 cm<sup>2</sup> bigger than the area of painting B.

Work out the area of painting A.

| <br>cm <sup>2</sup> |
|---------------------|
| Total 4 marks)      |

14. The average fuel consumption (c) of a car, in kilometres per litre, is given by the formula

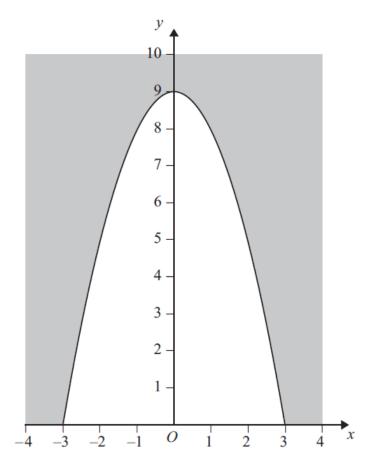

$$c = \frac{d}{f}$$

where d is the distance travelled in kilometres and f is the fuel used in litres.

d = 190 correct to 3 significant figures. f = 25.7 correct to 1 decimal place.

By considering bounds, work out the value of c to a suitable degree of accuracy. You must show **all** of your working **and** give a reason for your final answer.

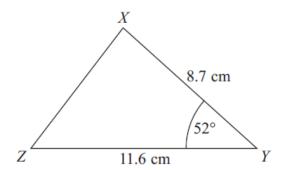

15. Here is a sketch of the graph of  $y = 9 - x^2$ 

The graph is used to model the cross section of a tunnel. The unshaded area is the cross section of the tunnel.

Calculate an estimate of the area of the cross section of the tunnel.
